SUMMARY

Full-stack developer with hands-on experience building and deploying AI-integrated web applications using React, Next.js, FastAPI, and Node.js. Skilled in REST API design, JWT/OAuth authentication and third-party AI API integration. Seeking a software Development role to build scalable, production-ready products.

EDUCATION

Bachelor of Technology in Information Technology

ITM (SLS) Baroda University

Vadodara, Gujarat
CGPA: 8.36 / 10 | Graduation : May 2026

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, SQL
Frameworks/Libraries: React, Next.js, Node.js, Express, FastAPI, Tailwind, Bootstrap
Databases: PostgreSQL, MongoDB, MySQL
Tools & Platforms: Git, GitHub, VS Code, Vercel, Render, Neon, Power BI

PROJECTS

Sq2Cube — 2D to 3D AI Converter *Python, React, FastAPI, PostgreSQL, fal.ai, JWT, OAuth | Vercel + Render*
sq2cube.vercel.app

- Built a full-stack AI platform converting 2D images and text prompts into downloadable 3D models (GLB/OBJ) via fal.ai's TripoSR and Tripo3D v2.5 APIs, supporting single image, multi-image (up to 4), and text-to-3D modes.
- Engineered a layered auth system with JWT (access + refresh tokens), bcrypt hashing, email OTP verification, OAuth via Google & GitHub, and password reset via tokenized email links using Gmail SMTP.
- Built a full admin panel with user management, content moderation, real-time site analytics, retention tracking, and maintenance mode that locks out regular users while allowing admin bypass.
- Implemented server-side security hardening - magic-byte image signature checks, base64 decoding validation, file size limits, and rate limiting via SlowAPI.
- Designed a React frontend with protected routes, persistent auth via `sessionStorage`, an Explore community gallery, generation history with delete support, and an animated 3D processing flow.

FitPact — Social Fitness Accountability App *Next.js, MongoDB Atlas, NextAuth, Groq (LLaMA 3.1), Cloudinary | Vercel*
fit-pact-flax.vercel.app

- Built a full-stack social fitness app where users form pacts via invite codes, track daily workouts, and compete on a live leaderboard with a real-time points system (+10 log, +25 streak bonus, -25 strike penalty).
- Integrated Groq's LLaMA 3.1-8b-instant to auto-generate personalized AI roasts when members miss workouts, referencing each user's live streak, strike count, and points from MongoDB.
- Implemented a strike and rest-day engine via a cron-style API — missed days consume the weekly rest day first; a second miss triggers a strike, resets streak, and deducts points; resets every Monday.
- Designed a 5-tier rank system (Couch Potato → Beast Mode) with a per-pact group chat storing both user and AI messages, flagged via an `isAI` field.
- Generated personalized weekly workout plans using Groq/LLaMA tailored to each user's goal frequency and streak, delivered via a NextAuth session-gated Next.js API route.

FinBoard — Personal Finance Dashboard *React, Node.js, Express, MongoDB, JWT, REST API | Vercel + Render*
fin-board-pearl.vercel.app

- Built and deployed a full-stack finance website with React (Vercel) and a REST API (Node.js/Express on Render) backed by MongoDB Atlas.
- Engineered JWT-based authentication with bcrypt password hashing and protected routes — each user sees only their own transactions.
- Designed a RESTful API with full CRUD operations, server-side filtering, pagination, and aggregation pipelines for financial summaries.
- Built interactive dashboards with Recharts showing real-time balance trends, spending breakdowns by category, and month-over-month comparisons.
- Implemented account management including secure registration, login, and permanent account deletion with cascading data cleanup.

CERTIFICATIONS

- Data Science — Infosys Springboard
- Computer Vision — Infosys Springboard
- Full Stack Web Development — Udemy
